

Health Cloud

AIMES is a health cloud provider to the NHS and have an established track record in delivering innovative and transformational IT hosting services in complex healthcare environments using a collaborative approach with both vendors and NHS trusts.

We have a strong understanding of the security and system requirements of the healthcare marketplace and an extremely professional approach to addressing these issues. With technical staff sharing over 40 years combined NHS experience, AIMES understands the unique challenges faced by healthcare organisations and subsequent priorities within a clinical setting.

AIMES support clients who are at the forefront of research and IT innovations for healthcare, and we welcome opportunities to share our knowledge and experience.

A-Cloud

A-Cloud is an enterprise-class Infrastructure as a Service (IaaS) platform based on VMware vCloud technology, provided via the internet and/or private network. This enables customers to consume server, storage and network infrastructure through a simple, unified platform.

Cloud resources are easily controlled and managed for the rapid provision and scaling of ICT infrastructure with enterprise-class security and management capabilities.

AIMES A-Cloud offers value-add cloud services via a highly skilled support service. The AIMES Network Operation Centre is headed up by service delivery management who are on hand to help support customers where needed.
