

Cloud Support

We offer cloud support on multiple levels for the scoping of client existing systems, planning and specifying of the required Cloud workloads (which includes performance, data storage, bandwidth parameters etc), the migration schedule plan and implementation of the client cloud workloads on to the AIMES secure cloud infrastructure.

- Quality assurance
- Performance testing
- Setup and migration
- Security services
- Security services
- Ongoing support
- Planning

One of the key elements to any successful implementation is the planning of the project, we believe that in-depth planning (including pre-sales review), will ensure that projects are completed on time and within the proposed onboarding timescales and costs. AIMES consultancy and implementation costs provided to the client are on a fixed cost basis, (following the initial Pre-sales review, which we undertake on a FOC basis). We always include an appropriate level of Project Management within our onboarding costs and in this way we ensure that our proposed project delivery timescales are met.

Professional Services

We can offer expertise for your project/organisation through our Network Engineers and/or Technical Architects; who can consult in three areas:

- **Cloud Readiness** — invest & consult on existing customer platforms and infrastructure to assist in cloud migration.
- **Pre-Solutions** — designing cloud-based services from a single application to entire platform. Ensuring this proposed solution meets with data governance and compliance regulations.
- **Deployment Services** — our dedicated deployment team will take approved designs and implement them on to our cloud, before handing over these systems to your organisation.
